Tableaux 11 et 12. STATISTIQUES DU CHÔMAGE.

I. Compulsory Unemployment Insurance Statistics.

These are the most comprehensive statistics of unemployment. They cover substantially all workers in industry, mining, building, commerce, transport, etc., except certain agricultural workers and certain groups of salaried employees. The unemployed in Austrian statistics are persons in receipt of ordinary and extended benefit (including persons employed on public relief works) and in the United Kingdom the total number of persons unemployed, including those in their waiting period or having exhausted their right to benefit. Persons out of work owing to sickness, accidents and, generally, also to industrial disputes are excluded.

II. Voluntary Unemployment Insurance Statistics.

These cover a wide range of occupations. Agriculture is excluded in Belgium; in Switzerland, the scope differs from one canton to another. In the Dutch and Swiss statistics, persons in their waiting period or having exhausted their right to benefit are considered as unemployed, but not those out of work owing to sickness, accidents or industrial disputes.

III. Trade Union Funds Returns.

These statistics include workers in manufacturing, mining, building, commerce, etc., except those engaged on compulsory work, whether regularly or on short time, and those working for charity.

IV. Employment Exchange Statistics.

This series refers to the number of unemployed registered for work in a uniform manner. It is impossible to give for this group one uniform definition, and, as a rule, to exclude those who, although not out of work, are maintaining registration with a view to changing work, or are employed in public relief works.

V. Employment Exchange Statistics (Tableaux 11 et 12).

These statistics include workers in manufacturing, mining, building, commerce, transport, etc., except those engaged on compulsory work and the majority of workers in industry and the various trades, inclusive of agriculture. (Since July 1933, employment exchange statistics.)

The Japanese and Bulgarian statistics are official estimates based on various information supplied by public authorities and cover the majority of industrial workers.

The French relief fund statistics refer to persons in receipt of relief from various public and private relief funds.

### Tableau 12. STATISTIQUES DU CHÔMAGE PAR GROUPES D'INDUSTRIE.

**Table 12. STATISTICS OF UNEMPLOYMENT BY GROUPS OF INDUSTRY.**

Note. — Les diverses industries et professions ont été classées d'après le plan-type suivant, établi par le Bureau international du Travail :

- **A. Agriculture** (y compris sylviculture, chasse et pêche).
- **B. Mines** (y compris carrières et puits de pétrole).
- **C. Métaux** (métallurgie, constructions mécaniques et électrotechniques, construction et réparation de véhicules et de navires, etc.).
- **D. Terre, pierre et verre.**
- **E. Bâtiment et construction.**
- **F. Bois (abattage, flottage, sciage, travail du bois, aménagement).**
- **G. Papier et industrie graphique.**
- **H. Textile.**
- **I. Vêtement** (y compris la chaussure).**
- **J. Peaux, cuirs et caoutchouc.**
- **K. Industrie chimique.**
- **L. Alimentation, boissons et tabac.**
- **M. Transports terrestres.**
- **N. Navigation (maritime et aérienne).**
- **O. Distribution d'eau, d'électricité et de gaz.**
- **P. Postes, télégraphes et téléphones.**
- **Q. Autres services publics** (voirie, services d'ordre et du feu, etc.).
- **R. Administrations publiques** (non mentionnées plus haut).
- **S. Commerce, banque et assurance.**
- **T. Service personnel** (hôtels et restaurants, service de maison, blanchisserie, etc.).
- **U. Entreprises de spectacles, etc.**
- **V. Etablissements relevant de professions libérales.**

Des notes détaillées, relatives aux statistiques du chômage, sont données à la page 57. (Des données relatives aux chômeurs selon les recensements de population se trouvent au tableau 4.)

</table>

Note. — The group "Total", which is the same as given in Table 11, refers to all industries covered by the national statistics — *i.e.*, including in some cases groups which are not specified in the table.

The industries and occupations have been arranged according to the following standard list, drawn up by the International Labour Office :

A. **Agriculture** (including forestry, hunting, fishing).
B. **Mining** (including quarries and oil-wells).
C. **Metals** (metallurgy, mechanical and electrical engineering, construction and repairing of vehicles, ships, etc.).
D. **Earthenware, stoneware, glass.**
E. **Building and construction.**
F. **Wood** (felling, floating, saw-milling, woodworking, furniture).
G. **Paper and printing.**
H. **Textiles.**
I. **Clothing** (including footwear).
J. **Skins, leather, rubber.**
K. **Chemical industry.**
L. **Food, drink, tobacco.**
M. **Land transport.**
N. **Navigation (maritime and air).**
O. **Water, electricity and gas supply.**
P. **Post, telephone, telephone.**
Q. **Other public services** (street-cleaning, police, fire departments, etc.).
R. **Public administration** (not mentioned above).
S. **Commerce, banking, insurance.**
T. **Personal services** (hotels and restaurants, domestic service, laundries, etc.).
U. **Entertainments, etc.**
V. **Establishments covering professional occupations.**

Detected notes on unemployment statistics are given on page 57. (Data relating to unemployed according to Census returns are given in Table 4.)
Table 12 (suite). Statistiques du chômage par groupes d'industrie. 
Table 12 (continued). Statistics of Unemployment by Groups of Industry.

Total des ouvriers: 6,889,539
Number of workers: 465,907, 345,835, 1,172,402, 777,383, 334,081

---

1. Relevés moins complets qu'au précédent.
2. Depuis IX.1933, nouveaux relevés se référant au front national du travail et ne comprenant pas les personnes occupées dans les camps de travail. Vu les changements de méthode apportés au cours des derniers mois, les chiffres ne sont pas toujours comparables.
3. Total des ouvriers servant de base aux derniers pourcentages.
4. Returns less complete than before.
5. Since IX.1933 new returns referring to the National Labour Front and not including persons occupied in labour camps. Owing to changes in method of computation made in recent months, the figures are not in all cases comparable.
6. Number of workers on which latest percentages are based.

Tableaux 13 et 14. DEGRÉ D'EMPLOI.

Tables 13 and 14. EMPLOYMENT.

Les chiffres des tableaux sont basés sur les données fournies par:

I. Les caisses d'assurance-maladie;
II. Les caisses d'assurance sociale;
III. L'assurance-chômage;
IV. Les Inspecteurs du travail;
V. Les employeurs.

En raison des différences dans la portée des statistiques ainsi que dans leurs méthodes d'établissement, les chiffres ne sont pas destinés à une comparaison directe de la main-d'œuvre employée dans les différents pays. Ils peuvent cependant être considérés comme représentant d'une manière adéquate les fluctuations de courte durée de l'emploi principalement dans l'industrie qui se produisent à l'intérieur de chaque pays.

Les trois premiers genres de données se réfèrent à des systèmes d'assurance, en général obligatoires et s'étendant à la grande majorité des travailleurs industriels. Les statistiques des deux derniers genres, basées sur les données communiquées par un certain nombre d'établissements sélectionnés, ont une portée plus restreinte; afin de tenir compte des changements dans le nombre des établissements fournis d'années, les séries sont souvent établies par enchaînement.

La plupart des données se rapportent au nombre des travailleurs occupés à certaines dates, sans tenir compte du nombre des heures de travail effectuées. Pour plusieurs pays, les tableaux contiennent cependant des indices relatifs à la durée de travail. Pour le Danemark, la Finlande, l'Italie et la Pologne, ces chiffres indiquent en principe le nombre global des heures de travail effectuées pendant le mois, diverses méthodes étant appliquées pour éliminer l'influence du nombre variable des jours ouvrables dans le mois. Les données correspondantes pour la Belgique et les Pays-Bas sont quelque peu différentes en ce sens qu'elles sont basées sur des statistiques du chômage montrant le rapport entre le nombre des journées de travail perdues par suite de chômage et le nombre des journées de travail qui auraient pu être effectuées s'il n'y avait eu de chômage.

Tandis que la majorité des nombres indices généraux du tableau 13 ont été recalculés sur la base de 1929, les chiffres par industries figurant dans le tableau 14 sont présentés sur leur base originale. Le tableau général indique en outre le nombre effectif des travailleurs occupés pendant toute la période envisagée, pour les Etats-Unis, l'Allemagne, l'Autriche et le Royaume-Uni (en milliers, chiffres en italique). Pour les Etats-Unis, le tableau contient en outre des chiffres indiquant le montant total des bordereaux de salaires.

Les chiffres absolu figurant au bas des colonnes de nombres-indices indiquent le nombre des travailleurs occupés à la dernière date pour laquelle ce nombre est disponible.

Les chiffres annuels sont des moyennes des chiffres mensuels. Le chiffres mensuels se réfèrent, sauf indication contraire, à la fin du mois.

† Pays pour lesquels les chiffres sont donnés par catégories d'industries dans le tableau 13:

** * *

NOTES AU TABLEAU 13 DEGRÉ D'EMPLOI : DONNÉES GÉNÉRALES (voir page suivante).

NOTES TO Table 13 Employment : GENERAL DATA (see following page).

a) 1er du mois suivant — 1st of the following month. b) 15 du mois — 15th of the month. c) Moyennes mensuelles — Monthly averages. d) 1er du mois — 1st of month. e) XII,

1 Belgique, Danemark, Finlande, Italie, Pays-Bas, Pologne : voir note générale.
2 Danemark : base 1931.
3 Finlande : base 1926 = 100.
4 France : mois correspondant de 1930 = 100 ; série révisée.
5 Italie : relevés du Ministere des corporations.
6 Italie : relevés de la Conféderation générale fasciste des industries.
7 Pologne : effectif : toutes les industries ; heures : industries manufacturières.
8 Grande-Bretagne seulement.
9 Pays-Bas : à partir de 1931, non compris l'agriculture.

The data of the tables are based on the returns from:

I. Sickness Insurance;
II. Social Insurance;
III. Unemployment Insurance;
IV. Labour Inspectors;
V. Employers.

Owing to differences in scope and methods, the data are not intended for direct comparison of the absolute extent of employment in the various countries. They may, however, be considered to represent adequately the short-time fluctuations — mainly of industrial employment — within each country.

The first three groups refer to insurance schemes which are generally compulsory and cover the great majority of industrial workers. The computations for the last two groups, based on returns from a number of selected establishments, are less comprehensive. In order to allow for changes in the number of establishments reporting, they are frequently calculated by means of a chain system.

The majority of the figures refer to the number of workers in employment at certain dates, irrespective of the number of hours worked. For several countries, however, the tables contain index numbers relating to the time worked. In the case of Denmark, Finland, Italy and Poland, these data represent in principle the aggregate number of hours worked during the month, various methods being utilised for eliminating the influence of the varying number of working days. The corresponding computations for Belgium and the Netherlands are somewhat different in so far as they are derived from unemployment statistics representing the ratios between the number of days lost by unemployment and the number of days which would have been worked if there had been no unemployment.

Whereas the majority of the general index numbers shown in Table 15 have been recomputed on the 1929 basis, the data by industrial groups, given in Table 14, are shown on the original basis. For the U. S. A., Germany, Austria and the United Kingdom, the general table contains the actual number of employed during the whole period (expressed in thousands, printed in italics). In addition, for the U.S.A., the table contains data referring to the amount of pay-rolls.

The actual figures given at the bottom of the columns containing index numbers refer to the number of employed at the latest date available.

Annual figures represent averages of the monthly figures; monthly data refer, unless otherwise stated, to the end of the month.

† Countries which are given with subdivisions by classes of industry in Table 13.

Tableau 15. NOMBRES-INDICES INTERNATIONAUX DU CHOMAGE.
Table 15. INTERNATIONAL INDEX NUMBERS OF UNEMPLOYMENT.

L'indice international est calculé à l'aide d'une moyenne géométrique pondérée d'après des indices établis pour les divers pays, la pondération étant basée sur l'importance de leur population industrielle. Les indices nationaux sont calculés sur la base des données telles qu'elles figurent au tableau 11. La valeur de l'indice international dépend donc en dernier lieu de la qualité et de l'étendue des données publiées pour chaque pays.

Une explication plus détaillée, accompagnée des indices nationaux, se trouve dans la Revue internationale du Travail, avril 1934.

The international index is calculated by means of a weighted geometric average from indices computed for the different countries, the weighting being based on the importance of their industrial population. The national indices are computed from data such as are given in Table 11. The value of the international index ultimately depends on the reliability and representativeness of the statistics computed in the various countries.

A detailed explanation, accompanied by national indices, was given in the International Labour Review, April 1934.

Base — Basis : 1929 = 100.

* Chiffres provisoires. — Provisional figures.

Tableau 16. — STATISTIQUES DES HEURES DE TRAVAIL EFFECTUÉES.
Table 16. — STATISTICS OF ACTUAL HOURS OF WORK.

Note générale — Les données relatives aux heures de travail effectuées sont de deux ordres : les unes se réfèrent au nombre moyen des heures de travail fournies par ouvrier au cours d'une période déterminée (par exemple, un jour, une semaine, au mois); les autres indiquent les pourcentages d'ouvriers travaillant un nombre déterminé d’heures ou un nombre d'heures compris entre des limites déterminées.

Comme les données ne se rapportent en général qu'à une sélection d’entreprises, elles ne représentent pas nécessairement la durée du travail de l'ensemble des ouvriers d'un pays. Elles se prétendent donc mieux à l'étude des changements survenus dans chaque pays au cours des années qu'à une comparaison internationale.

Notes au tableau donné à la page suivante.

a) VII-XII. b) 1929-1931: première semaine de janvier; depuis 1932, moyennes de la première semaine de janvier et juillet. c) 1er mois suivant. d) II-XII. e) XI. f) Moyennes des 2e et 3e trimestres.

2 Allemagne : pourcentage des ouvriers: Front allemand du Travail; les données ne sont pas toujours strictement comparables d'un mois à l'autre. Moyennes d'heures : Office de statistique du Reich.
3 Autriche : répartition exacte : jusqu'à 40 h.; plus de 40 h. jusqu'à 48 h.; plus de 48 h.; durée inconnue.
5 Italie : Confédération générale fasciste des industries.
6 Suède : série établie en relation avec la statistique de l'emploi.

General Note. — The data concerning actual hours of work are of two kinds: some of these statistics refer to the average number of hours worked per worker in a certain period (e.g., a day, a week, a month); others show the percentage of workers working certain specified hours, or hours within a certain range.

As the figures usually cover only a sample of undertakings, they should not be taken as necessarily representing the hours of work for the whole of the workers in a country. They are better suited therefore to comparing changes within the different countries during recent years than to international comparisons.

Notes:
- *Estimation or provisional figure.*
### Tableau 17. NOMBRES-INDICES DE SALAIRES.

**Table 17. INDEX NUMBERS OF WAGES.**

**Source:** Tableau fourni par le Bureau international du Travail. — Table supplied by the International Labour Office.

**Note.** — La méthode d'établissement de ces séries est indiquée dans les *Statistiques Sociales, 1934* (publiées par le B. I. T.), qui contiennent également les indices correspondants de salaires réels et les montants absolus des salaires (moyennes générales et chiffres détaillés par industrie et profession). Les indices des salaires nominaux et réels sont en outre publiés trimestriellement dans la *Revue internationale du Travail*.

Les indices ont été calculés par le Bureau international du Travail à l'aide de données sur le montant absolu des salaires (ou, à défaut, de nombres-indices) et en prenant l'année 1929 comme base. Pour quelques pays (séries en italique), l'année la plus proche de cette date a dû être prise comme base.

Les chiffres I à VI donnés dans les en-têtes indiquent la composition des groupes économiques compris dans les statistiques, et qui sont les suivants:

I. *Agriculture* : y compris la sylviculture et l'élevage.
II. *Mines* : y compris les carrières et puits de pétrole.
III. *Industries* : ensemble des industries de transformation ainsi que le bâtiment et les constructions.
IV. *Services publics* : tous les transports, les distributions d'eau, de lumière et de force, les P. T. T. et toutes les administrations publiques.
V. *Commerce* : y compris les banques, assurances, hôtels et restaurants, etc.
VI. *Divers* : groupes de professions mal déterminées ou de genre trop spécial pour être attribuées à une autre rubrique.

Sauf indication contraire, les chiffres annuels représentent des moyens couvrant l'année entière.
